EXPERIENCE

Contract Software Engineer | Sentro

April 2026 - June 2026

Next.js, NestJS, Supabase, Vercel

- Architected a multi-tenant fitness management platform using Next.js and NestJS, isolating tenant databases on Supabase Premium infrastructure to support high-concurrency gym facilities.
- Engineered a 6-tier Role-Based Access Control (RBAC) system supporting dynamic permissions for Admins, Staff, Front Desk, and Coaches, securing access to internal billing and scheduling workflows.
- Designed backend service layers and REST APIs, optimizing query routing and enabling scalable data management for production deployment.

Founder & Operations Lead | Cham's Collectables

2024 – Present

TikTok Shop, Shopee, Inventory Logistics

- Bootstrapped and scaled a digital e-commerce retail operation, generating ₱200K–₱500K in total verified revenue.
- Automated and managed end-to-end digital sales pipelines across TikTok Shop and Shopee, streamlining inventory tracking and fulfilling 15–20 consistent monthly orders.
- Secured official DTI and BIR business registrations, ensuring full regulatory compliance for continuous commercial operations.

PROJECTS

NaviGuard | C/C++, ESP32, React Native, Next.js, Firebase, Google Maps API

- Engineered an IoT accessibility system for visually impaired users by interfacing an ESP32 microcontroller with ultrasonic and GPS hardware, achieving real-time obstacle detection within a 15cm radius.
- Bridged physical hardware to a React Native mobile application via BLE, establishing real-time data synchronization with Firebase to push caregiver alerts with a 2–3 second latency.
- Developed a Next.js command center dashboard integrating the Google Maps API, enabling remote geospatial tracking and live monitoring of the active prototype device.

MedicAI | React Native, Supabase (PostgreSQL), OpenAI API, HealthKit

- Developed an offline-first medical prototype utilizing React Native, integrating SFSpeechRecognizer and OpenAI APIs to parse voice-activated patient logs into structured database records.
- Architected a secure backend utilizing Supabase PostgreSQL with strict Row Level Security (RLS) policies and Edge Functions to process AI vision pill scanning and automated PDF report generation.
- Integrated Apple HealthKit and Google Health Connect to aggregate patient vitals, executing local medication scheduling independent of network connectivity.

SKILLS

Languages: TypeScript, JavaScript, C/C++, Dart, HTML/CSS

Frameworks & Libraries: React Native, Next.js, NestJS, React, Tailwind CSS, Node.js

Databases & Cloud: Supabase, PostgreSQL, Firebase, Vercel

Tools & Hardware: Git, Cursor IDE, ESP32, REST APIs, BLE Integration

EDUCATION

St Dominic College Of Asia
BS in Information Technology

Imus, Cavite
2027
